Speech Processing Lab Assignment 2

Dewang Choudhary

BL.EN.U4AIE23145

Objective

The objective of this assignment is to process a speech signal, extract specific phonemes, and visualize their waveforms while labeling them. This includes:

- Loading a speech signal from the LJ Speech dataset
- Preprocessing the audio (convert to mono, resample to 16kHz)
- Using a pre-trained deep learning model (Wav2Vec2) to recognize phonemes
- Estimating phoneme time intervals
- Extracting phoneme segments from the speech signal based on time intervals
- Saving extracted phoneme and visualizing each selected phoneme segment from the speech waveform
- Inferring about the nature of source of sound for each phoneme

This experiment will help understand how deep learning-based speech models process spoken language and how phonemes can be visualized from continuous speech.

1. Import Required Libraries

Data Description

- **Audio Source**: Speech audio from LJ Speech dataset or sample audio
- **Format**: WAV (Waveform Audio File Format)
- **Target Sample Rate**: 16000 Hz (required for Wav2Vec2 model)
- **Channels**: Mono (single channel)
- **Model**: Wav2Vec2-lv-60-espeak-cv-ft (pre-trained phoneme recognition model)
- **Processing Parameters**:
  - Time step: ~20ms per prediction frame
  - Phoneme representation: IPA (International Phonetic Alphabet) symbols
  - Output: Phoneme sequence with time intervals

```
import torch
import torchaudio
import librosa
import librosa.display
import matplotlib.pyplot as plt
import numpy as np
from transformers import Wav2Vec2Processor, Wav2Vec2ForCTC
import warnings
```

```
warnings.filterwarnings('ignore')

print("Libraries imported successfully!")
print(f"PyTorch version: {torch.__version__}")
print(f"Torchaudio version: {torchaudio.__version__}")
```

```
Libraries imported successfully!
PyTorch version: 2.10.0+cpu
Torchaudio version: 2.10.0+cpu
```

2. Load Pre-trained Wav2Vec2 Model

```
model_name = "facebook/wav2vec2-base-960h"

print("Loading Wav2Vec2 model and processor...")
processor = Wav2Vec2Processor.from_pretrained(model_name)
model = Wav2Vec2ForCTC.from_pretrained(model_name)
model.eval()

print("Model loaded successfully!")
```

```
Loading Wav2Vec2 model and processor...

Some weights of Wav2Vec2ForCTC were not initialized from the model
checkpoint at facebook/wav2vec2-base-960h and are newly initialized:
['wav2vec2.masked_spec_embed']
You should probably TRAIN this model on a down-stream task to be able
to use it for predictions and inference.

Model loaded successfully!
```

3. Load and Preprocess Speech Signal

```
print("Loading audio file...")

audio_filename = "LJ001-0003.wav"
waveform_np, sample_rate = librosa.load(audio_filename, sr=None,
mono=False)

if waveform_np.ndim == 1:
    waveform_np = waveform_np.reshape(1, -1)
elif waveform_np.ndim == 2 and waveform_np.shape[0] >
waveform_np.shape[1]:
    waveform_np = waveform_np.T

waveform = torch.from_numpy(waveform_np).float()

print(f"Original sample rate: {sample_rate} Hz")
print(f"Original waveform shape: {waveform.shape}")
```

```
if waveform.shape[0] > 1:
    waveform = torch.mean(waveform, dim=0, keepdim=True)
    print("Converted to mono")

target_sample_rate = 16000
if sample_rate != target_sample_rate:
    resampler = torchaudio.transforms.Resample(sample_rate,
target_sample_rate)
    waveform = resampler(waveform)
    sample_rate = target_sample_rate
    print(f"Resampled to {target_sample_rate} Hz")

print(f"\nProcessed waveform shape: {waveform.shape}")
print(f"Audio duration: {waveform.shape[1] / sample_rate:.2f}
seconds")
```

```
Loading audio file...
Original sample rate: 22050 Hz
Original waveform shape: torch.Size([1, 213149])
Resampled to 16000 Hz

Processed waveform shape: torch.Size([1, 154666])
Audio duration: 9.67 seconds
```

4. Recognize Phonemes using Wav2Vec2

```
print("Running phoneme recognition...")

input_values = processor(waveform[0].numpy(),
sampling_rate=sample_rate, return_tensors="pt").input_values

with torch.no_grad():
    logits = model(input_values).logits

predicted_ids = torch.argmax(logits, dim=-1)

transcription = processor.decode(predicted_ids[0])

print(f"\nRecognized Phonemes: {transcription}")
print(f"Number of phonemes: {len(transcription.split())}")
```

```
Running phoneme recognition...

Recognized Phonemes: FOR ALTHOUGH THE CHINESE TOOK IMPRESSIONS FROM
WOOD BLOCKS ENGRAVED IN RELIEF FOR CENTURIES BEFORE THE WOOD CUTTERS
OF THE NETHERLANDS BY A SIMILAR PROCESS
Number of phonemes: 25
```

5. Estimate Phoneme Time Intervals

```
phonemes = transcription.split()

time_step = waveform.shape[1] / logits.shape[1] / sample_rate

predicted_tokens = predicted_ids[0].numpy()
phoneme_intervals = []

current_phoneme = None
start_idx = 0

for idx, token_id in enumerate(predicted_tokens):
    if token_id != processor.tokenizer.pad_token_id:
        phoneme = processor.decode([token_id]).strip()
        if phoneme and phoneme != current_phoneme:
            if current_phoneme is not None:
                start_time = start_idx * time_step
                end_time = idx * time_step
                phoneme_intervals.append({
                    'phoneme': current_phoneme,
                    'start': start_time,
                    'end': end_time,
                    'start_sample': int(start_time * sample_rate),
                    'end_sample': int(end_time * sample_rate)
                })
            current_phoneme = phoneme
            start_idx = idx

if current_phoneme is not None:
    start_time = start_idx * time_step
    end_time = len(predicted_tokens) * time_step
    phoneme_intervals.append({
        'phoneme': current_phoneme,
        'start': start_time,
        'end': end_time,
        'start_sample': int(start_time * sample_rate),
        'end_sample': int(end_time * sample_rate)
    })

print("\nPhoneme Time Intervals:")
print("=" * 60)
for i, interval in enumerate(phoneme_intervals, 1):
    print(f"{i}. Phoneme: {interval['phoneme']:5s} | "
          f"Time: {interval['start']:.3f}s - {interval['end']:.3f}s |
"
          f"Duration: {interval['end'] - interval['start']:.3f}s")

Phoneme Time Intervals:

Recognized Phonemes: FOR ALTHOUGH THE CHINESE TOOK IMPRESSIONS FROM
WOOD BLOCKS ENGRAVED IN RELIEF FOR CENTURIES BEFORE THE WOOD CUTTERS
OF THE NETHERLANDS BY A SIMILAR PROCESS
Total number of phonemes: 124

1. Phoneme: 'F' | Unvoiced fricative - turbulent airflow creating
noise-like sound, no vocal cord vibration
   Duration: 0.080s | Time: 0.000s - 0.080s

2. Phoneme: 'O' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.020s | Time: 0.080s - 0.100s

3. Phoneme: 'R' | Voiced approximant - smooth airflow with minimal
constriction, vocal cord vibration
   Duration: 0.160s | Time: 0.100s - 0.260s

4. Phoneme: 'A' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.020s | Time: 0.260s - 0.280s

5. Phoneme: 'L' | Voiced approximant - smooth airflow with minimal
constriction, vocal cord vibration
   Duration: 0.060s | Time: 0.280s - 0.340s

6. Phoneme: 'T' | Unvoiced plosive - stop closure followed by burst
release, no vocal cord vibration
   Duration: 0.040s | Time: 0.340s - 0.380s

7. Phoneme: 'H' | Unvoiced fricative - turbulent airflow creating
noise-like sound, no vocal cord vibration
   Duration: 0.040s | Time: 0.380s - 0.420s

8. Phoneme: 'O' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.020s | Time: 0.420s - 0.440s

9. Phoneme: 'U' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.020s | Time: 0.440s - 0.460s

10. Phoneme: 'G' | Voiced plosive - stop closure followed by burst
release, with vocal cord vibration
   Duration: 0.040s | Time: 0.460s - 0.500s

11. Phoneme: 'H' | Unvoiced fricative - turbulent airflow creating
noise-like sound, no vocal cord vibration
```

```
   Duration: 0.080s | Time: 0.500s - 0.580s

12. Phoneme: 'T' | Unvoiced plosive - stop closure followed by burst
release, no vocal cord vibration
   Duration: 0.020s | Time: 0.580s - 0.600s

13. Phoneme: 'H' | Unvoiced fricative - turbulent airflow creating
noise-like sound, no vocal cord vibration
   Duration: 0.040s | Time: 0.600s - 0.640s

14. Phoneme: 'E' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.080s | Time: 0.640s - 0.720s

15. Phoneme: 'C' | Unknown phoneme type - requires further acoustic
analysis
   Duration: 0.020s | Time: 0.720s - 0.741s

16. Phoneme: 'H' | Unvoiced fricative - turbulent airflow creating
noise-like sound, no vocal cord vibration
   Duration: 0.120s | Time: 0.741s - 0.861s

17. Phoneme: 'I' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.080s | Time: 0.861s - 0.941s

18. Phoneme: 'N' | Voiced nasal - produced with nasal resonance, low-
frequency energy with vocal cord vibration
   Duration: 0.120s | Time: 0.941s - 1.061s

19. Phoneme: 'E' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.080s | Time: 1.061s - 1.141s

20. Phoneme: 'S' | Unvoiced fricative - turbulent airflow creating
noise-like sound, no vocal cord vibration
   Duration: 0.020s | Time: 1.141s - 1.161s

21. Phoneme: 'E' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.140s | Time: 1.161s - 1.301s

22. Phoneme: 'T' | Unvoiced plosive - stop closure followed by burst
release, no vocal cord vibration
   Duration: 0.040s | Time: 1.301s - 1.341s

23. Phoneme: 'O' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.080s | Time: 1.341s - 1.421s
```

```
24. Phoneme: 'K' | Unvoiced plosive - stop closure followed by burst
release, no vocal cord vibration
   Duration: 0.160s | Time: 1.421s - 1.581s

25. Phoneme: 'I' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.020s | Time: 1.581s - 1.601s

26. Phoneme: 'M' | Voiced nasal - produced with nasal resonance, low-
frequency energy with vocal cord vibration
   Duration: 0.080s | Time: 1.601s - 1.681s

27. Phoneme: 'P' | Unvoiced plosive - stop closure followed by burst
release, no vocal cord vibration
   Duration: 0.040s | Time: 1.681s - 1.721s

28. Phoneme: 'R' | Voiced approximant - smooth airflow with minimal
constriction, vocal cord vibration
   Duration: 0.060s | Time: 1.721s - 1.781s

29. Phoneme: 'E' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.020s | Time: 1.781s - 1.801s

30. Phoneme: 'S' | Unvoiced fricative - turbulent airflow creating
noise-like sound, no vocal cord vibration
   Duration: 0.120s | Time: 1.801s - 1.921s

31. Phoneme: 'I' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.040s | Time: 1.921s - 1.961s

32. Phoneme: 'O' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.040s | Time: 1.961s - 2.001s

33. Phoneme: 'N' | Voiced nasal - produced with nasal resonance, low-
frequency energy with vocal cord vibration
   Duration: 0.080s | Time: 2.001s - 2.081s

34. Phoneme: 'S' | Unvoiced fricative - turbulent airflow creating
noise-like sound, no vocal cord vibration
   Duration: 0.300s | Time: 2.081s - 2.382s

35. Phoneme: 'F' | Unvoiced fricative - turbulent airflow creating
noise-like sound, no vocal cord vibration
   Duration: 0.040s | Time: 2.382s - 2.422s

36. Phoneme: 'R' | Voiced approximant - smooth airflow with minimal
constriction, vocal cord vibration
```

```
   Duration: 0.060s | Time: 2.422s - 2.482s

37. Phoneme: 'O' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.020s | Time: 2.482s - 2.502s

38. Phoneme: 'M' | Voiced nasal - produced with nasal resonance, low-
frequency energy with vocal cord vibration
   Duration: 0.120s | Time: 2.502s - 2.622s

39. Phoneme: 'W' | Voiced approximant - smooth airflow with minimal
constriction, vocal cord vibration
   Duration: 0.040s | Time: 2.622s - 2.662s

40. Phoneme: 'O' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.100s | Time: 2.662s - 2.762s

41. Phoneme: 'D' | Voiced plosive - stop closure followed by burst
release, with vocal cord vibration
   Duration: 0.120s | Time: 2.762s - 2.882s

42. Phoneme: 'B' | Voiced plosive - stop closure followed by burst
release, with vocal cord vibration
   Duration: 0.040s | Time: 2.882s - 2.922s

43. Phoneme: 'L' | Voiced approximant - smooth airflow with minimal
constriction, vocal cord vibration
   Duration: 0.180s | Time: 2.922s - 3.102s

44. Phoneme: 'O' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.020s | Time: 3.102s - 3.122s

45. Phoneme: 'C' | Unknown phoneme type - requires further acoustic
analysis
   Duration: 0.060s | Time: 3.122s - 3.182s

46. Phoneme: 'K' | Unvoiced plosive - stop closure followed by burst
release, no vocal cord vibration
   Duration: 0.100s | Time: 3.182s - 3.282s

47. Phoneme: 'S' | Unvoiced fricative - turbulent airflow creating
noise-like sound, no vocal cord vibration
   Duration: 0.560s | Time: 3.282s - 3.843s

48. Phoneme: 'E' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.020s | Time: 3.843s - 3.863s
```

```
49. Phoneme: 'N' | Voiced nasal - produced with nasal resonance, low-
frequency energy with vocal cord vibration
   Duration: 0.080s | Time: 3.863s - 3.943s

50. Phoneme: 'G' | Voiced plosive - stop closure followed by burst
release, with vocal cord vibration
   Duration: 0.060s | Time: 3.943s - 4.003s

51. Phoneme: 'R' | Voiced approximant - smooth airflow with minimal
constriction, vocal cord vibration
   Duration: 0.140s | Time: 4.003s - 4.143s

52. Phoneme: 'A' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.080s | Time: 4.143s - 4.223s

53. Phoneme: 'V' | Voiced fricative - turbulent airflow with vocal
cord vibration
   Duration: 0.060s | Time: 4.223s - 4.283s

54. Phoneme: 'E' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.020s | Time: 4.283s - 4.303s

55. Phoneme: 'D' | Voiced plosive - stop closure followed by burst
release, with vocal cord vibration
   Duration: 0.120s | Time: 4.303s - 4.423s

56. Phoneme: 'I' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.020s | Time: 4.423s - 4.443s

57. Phoneme: 'N' | Voiced nasal - produced with nasal resonance, low-
frequency energy with vocal cord vibration
   Duration: 0.100s | Time: 4.443s - 4.543s

58. Phoneme: 'R' | Voiced approximant - smooth airflow with minimal
constriction, vocal cord vibration
   Duration: 0.040s | Time: 4.543s - 4.583s

59. Phoneme: 'E' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.080s | Time: 4.583s - 4.663s

60. Phoneme: 'L' | Voiced approximant - smooth airflow with minimal
constriction, vocal cord vibration
   Duration: 0.060s | Time: 4.663s - 4.723s

61. Phoneme: 'I' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
```

```
   Duration: 0.040s | Time: 4.723s - 4.763s

62. Phoneme: 'E' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.040s | Time: 4.763s - 4.803s

63. Phoneme: 'F' | Unvoiced fricative - turbulent airflow creating
noise-like sound, no vocal cord vibration
   Duration: 0.260s | Time: 4.803s - 5.063s

64. Phoneme: 'O' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.020s | Time: 5.063s - 5.083s

65. Phoneme: 'R' | Voiced approximant - smooth airflow with minimal
constriction, vocal cord vibration
   Duration: 0.120s | Time: 5.083s - 5.204s

66. Phoneme: 'C' | Unknown phoneme type - requires further acoustic
analysis
   Duration: 0.100s | Time: 5.204s - 5.304s

67. Phoneme: 'E' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.020s | Time: 5.304s - 5.324s

68. Phoneme: 'N' | Voiced nasal - produced with nasal resonance, low-
frequency energy with vocal cord vibration
   Duration: 0.080s | Time: 5.324s - 5.404s

69. Phoneme: 'T' | Unvoiced plosive - stop closure followed by burst
release, no vocal cord vibration
   Duration: 0.080s | Time: 5.404s - 5.484s

70. Phoneme: 'U' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.020s | Time: 5.484s - 5.504s

71. Phoneme: 'R' | Voiced approximant - smooth airflow with minimal
constriction, vocal cord vibration
   Duration: 0.100s | Time: 5.504s - 5.604s

72. Phoneme: 'I' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.020s | Time: 5.604s - 5.624s

73. Phoneme: 'E' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.040s | Time: 5.624s - 5.664s
```

```
74. Phoneme: 'S' | Unvoiced fricative - turbulent airflow creating
noise-like sound, no vocal cord vibration
   Duration: 0.120s | Time: 5.664s - 5.784s

75. Phoneme: 'B' | Voiced plosive - stop closure followed by burst
release, with vocal cord vibration
   Duration: 0.060s | Time: 5.784s - 5.844s

76. Phoneme: 'E' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.060s | Time: 5.844s - 5.904s

constriction, vocal cord vibration
   Duration: 0.100s | Time: 8.846s - 8.946s

119. Phoneme: 'P' | Unvoiced plosive - stop closure followed by burst
release, no vocal cord vibration
   Duration: 0.040s | Time: 8.946s - 8.986s

120. Phoneme: 'R' | Voiced approximant - smooth airflow with minimal
constriction, vocal cord vibration
   Duration: 0.140s | Time: 8.986s - 9.126s

121. Phoneme: 'O' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.100s | Time: 9.126s - 9.226s

122. Phoneme: 'C' | Unknown phoneme type - requires further acoustic
analysis
   Duration: 0.100s | Time: 9.226s - 9.326s

123. Phoneme: 'E' | Voiced vowel - produced with vocal cord vibration
and open vocal tract
   Duration: 0.040s | Time: 9.326s - 9.366s

124. Phoneme: 'S' | Unvoiced fricative - turbulent airflow creating
```

```
noise-like sound, no vocal cord vibration
   Duration: 0.300s | Time: 9.366s - 9.667s
```

8. Save Extracted Phoneme Segments

```python
import os
import soundfile as sf

output_dir = "phoneme_segments"
os.makedirs(output_dir, exist_ok=True)

print(f"Saving phoneme segments to '{output_dir}' directory...\n")

for i, interval in enumerate(phoneme_intervals, 1):
    start_sample = interval['start_sample']
    end_sample = interval['end_sample']
    segment = waveform[:, start_sample:end_sample]

    filename =
f"{i:02d}_{interval['phoneme']}_{interval['start']:.3f}s.wav"
    filepath = os.path.join(output_dir, filename)

    sf.write(filepath, segment.squeeze().numpy(), sample_rate)
    print(f"Saved: {filename}")

print(f"\nAll phoneme segments saved successfully!")
```

```

All phoneme segments saved successfully!
```

Conclusion

This assignment successfully demonstrated phoneme extraction and visualization from continuous speech using the Wav2Vec2 deep learning model.

Key Findings:

1. **Phoneme Recognition**: The Wav2Vec2 model effectively recognized phonemes from continuous speech with temporal alignment.

2. **Audio Preprocessing**: Successfully converted audio to mono and resampled to 16kHz as required by the model.

3. **Phoneme Time Intervals**: Accurately estimated start and end times for each phoneme in the speech signal.

4. **Phoneme Visualization**: Waveform and spectrogram plots revealed distinct acoustic characteristics for different phoneme types.

5. **Sound Source Analysis**:

   - **Voiced sounds** (vowels, nasals): Show periodic waveforms with vocal cord vibration
   - **Unvoiced sounds** (fricatives, plosives): Display aperiodic noise patterns without vocal cord vibration
   - **Plosives**: Characterized by burst patterns
   - **Fricatives**: Show continuous high-frequency noise
6. **Practical Applications**: This technique is useful for speech recognition, synthesis, phonetic analysis, language learning, and speech therapy.

The experiment demonstrated how modern deep learning models can automatically segment and analyze phonemes, providing insights into the acoustic properties of speech sounds.
